EDUCATION

NORTHEASTERN UNIVERSITY, Boston, MA   September 2011 – May 2016
Khoury College of Computer Sciences
Bachelor of Science in Computer Science and Information Science (Dual Major)   **GPA: 3.77 / 4.00**
National Science Foundation CyberCorps Scholarship for Service Award Recipient – 2 years

NORTHEASTERN UNIVERSITY, Boston, MA   September 2016 – May 2018
Khoury College of Computer Sciences
Master of Science in Information Assurance and Cybersecurity   **GPA: 4.00 / 4.00**
National Science Foundation CyberCorps Scholarship for Service Award Recipient – 1 year

COMPUTER KNOWLEDGE

Languages: JavaScript (Node, Vue), Python 3, HTML, Swift, Java, C, Bash/Zsh, Kotlin, Golang
Systems: macOS, Windows, Linux (Ubuntu, Kali, RHEL), iOS, Android
Databases: mongoDB, MySQL, MS SQL, Oracle, Elasticsearch
Applications: Docker, VSCode, Xcode, Git, CI/CD (GitHub, Gitlab, Jenkins, Atlassian products),
              Microsoft Teams, Zoom, WebEx, Google Meet, Slack, Mural
Platforms: Google Cloud Platform (GCP), Firebase, Kinvey, Amazon Web Services (AWS),
              Digital Ocean

EXPERIENCE

Lead Mobile Architect & Web Applications Developer   June 2018 - Present
The MITRE Corporation, Bedford, MA   **Active DOD Secret Clearance**

- Championed a mobile app backend migration project which shifted towards a secure and scalable cloud-first solution while reducing complexity and enabling new capabilities
- Developed impactful new features and frameworks for the iOS and Android versions of MITRE@Work, MITRE's most commonly used corporate mobile app, while independently learning Swift for iOS
- Orchestrated mobile application metrics reporting, expanded scripted modules for improved analysis
- Pioneered new automations to facilitate and expedite mobile application development across MITRE
- Transformed our application CI/CD pipelines to leverage virtual machines for scalability and availability
- Led development effort for Elasticsearch data loading processes for an application re-design and re-architected the project to improve maintainability, efficiency, and to meet the project needs
- Maintained and enhanced existing MEAN stack and Vue-based web applications
- Identified and aided in the implementation of technical controls to improve the cybersecurity posture of new and existing applications and features
- Mentored multiple co-ops and summer interns through a variety of different development projects
- Headed the Northeastern Co-op hiring process for the department through to the hiring decision
- Earned 22 corporate awards for technical leadership, development contributions, and mentorship

Full Stack Web Applications Developer Co-op   January 2014 – June 2014
The MITRE Corporation, Bedford, MA   January 2015 – June 2015
                                                  June 2016 – August 2016
                                                  May 2017 – July 2017

- Contributed to the development of a new organization web application used by all of MITRE and was the point of contact for the application's cutover
- Developed a team dashboard application using web sockets which periodically checks the status of our applications and alerts team members of any identified issues
- Consulted on organizational web application penetration testing and approaches to automated application security testing

- Led the development and requirements elicitation for two new web applications: an external wireless network passcode service and RSS feed management portal
- Automated the reporting processes for MITRE@Work mobile application usage via a Python script
- Developed a new NodeJS campaign service to recommend skill tags to employees using the MEAN stack
- Maintained, enhanced, and rewrote existing applications to abstract the code base, increase efficiency, and convert them to use updated libraries such as AngularJS
- Led daily standup meetings for team of six to nine engineers
- Earned two corporate awards for technical innovations and explorations of new technologies

Symmetrix Systems Integration Engineer Co-op   January 2013 – August 2013
EMC Corporation, Franklin, MA
- Developed four websites, including a firmware repository website which is used internationally to manage drive firmware
- Rewrote various system and test scripts that were previously outdated, eliminating up to 500 lines of unnecessary code in one script while still adding new features
- Initiated and implemented a new approach to how tests were started, monitored, and conducted to increase efficiency and aid in system test automation
- Created and maintained a drive error logging mongoDB database for all 21 systems in the lab using an intricate Python error collection script and Symmetrix Fiber Channel API

Naval Research Enterprise Intern   May 2012 – July 2012
Science and Engineering Apprenticeship Intern   June 2011 – August 2011
Naval Undersea Warfare Center, Newport, RI   **DOD Secret Clearance**
- Developed and updated GUI program that sends and receives commands via network interfaces
- Supervised technical testing performed by contractors
- Designed various functions for a PIC32 Processor enabling data transfer (Ethernet & USB)

PROJECTS

SignatureLimoCompany.com - Solution Architect/Developer, Security Advisor   3/2014 - Present

Open-Source Node modules on NPM:	Github Stars	Monthly Downloads	Date Launched
json-2-csv	255	220,000	4/2014
tag-cloud	6	150	1/2015
memo-cache	3	20	3/2015
doc-path	1	230,000	4/2015
updep	5	20	11/2015
objecdiff	1	20	6/2016
htpasswd-mgr	2	20	10/2018
deeks	3	220,000	11/2018
@mrodrig/json-2-csv-cli	2	220	12/2019
vue-scandit	0	100	8/2020

Additional independent projects available on GitHub: mrodrig

INTERESTS

Photography, Cars, Programming (open source, learning new languages), Cybersecurity & digital forensics, Network security, PC hardware and overclocking
